

## PHI 502: Philosophy of Kant

The seminar will focus on two major divisions of the second half of Kant's *Critique of Pure Reason*: the Transcendental Dialectic and the Transcendental Doctrine of Method. Topics will include Kant's doctrine of transcendental illusion; the critique of the rationalist schools and 'dialectical' inferences of rational psychology, cosmology, and theology; the regulative employment of the ideas of pure reason; and the theories of belief, knowledge and proof underpinning the critical philosophy.
